# BIOLOGICAL SOIL AMENDMENTS

for Enhanced Soil Productivity

CustomBio Biological Soil Amendments are naturally formulated to restore soil productivity and improve crop yields. They are perfectly suited for all types and varieties of crops and soils.

Each amendment contains a large number of beneficial microorganisms. These microorganisms help to break down organic matter and release nutrients, making them available to plants. They also help to improve soil structure, increase water retention, and reduce soil erosion.

CustomBio Biological Soil Amendments are available in a variety of formulations to meet the needs of different crops and soil types. For more information, visit our website at [www.custombio.com](http://www.custombio.com).
